

Cisco Networking Pro (CCNA7) Exam Objectives

Cisco Networking Pro (CCNA7) Exam Objectives

This document contains the objectives for the Cisco Networking Pro (CCNA7) certification exam.

1. 1.0 Device Setup and Configuration

a. 1.1 Setup and configure a router

- i. 1.1.1 Setup and configure a router > **View router configuration information**
- ii. 1.1.2 Setup and configure a router > **Configure router hostnames and interface descriptions**
- iii. 1.1.3 Setup and configure a router > **Configure router banners**
- iv. 1.1.4 Setup and configure a router > **Manage router configuration files**

b. 1.2 Setup and configure a switch

- i. 1.2.1 Setup and configure a switch > **View switch configuration information**
- ii. 1.2.2 Setup and configure a switch > **Configure switch hostnames and interface descriptions**
- iii. 1.2.3 Setup and configure a switch > **Configure switch banners**
- iv. 1.2.4 Setup and configure a switch > **Manage switch configuration files**

2. 2.0 Interface Configuration

a. 2.1 Configure a router interface

- i. 2.1.1 Configure a router interface > **View the status of router interfaces**
- ii. 2.1.2 Configure a router interface > **View directly-connected devices using CDP**
- iii. 2.1.3 Configure a router interface > **Manage the CDP configuration**
- iv. 2.1.4 Configure a router interface > **Configure Ethernet and serial router interfaces**
- v. 2.1.5 Configure a router interface > **Troubleshoot router connections**

b. 2.2 Configure a switch interface

- i. 2.2.1 Configure a switch interface > **View the status of switch interface**
- ii. 2.2.2 Configure a switch interface > **Configure interface speed and duplex settings**
- iii. 2.2.3 Configure a switch interface > **View directly-connected network**

devices using CDP

- iv. 2.2.4 Configure a switch interface > **Manage the CDP configuration**

3. 3.0 Network Connectivity

a. 3.1 Configure device IP settings

- i. 3.1.1 Configure device IP settings > **Configure router TCP/IP settings**
- ii. 3.1.2 Configure device IP settings > **Configure switch TCP/IP settings**
- iii. 3.1.3 Configure device IP settings > **Troubleshoot LAN communications**

b. 3.2 Implement IP routing

- i. 3.2.1 Implement IP routing > **Calculate and configure subnet masks for network hosts**
- ii. 3.2.2 Implement IP routing > **Configure static routes on a router**
- iii. 3.2.3 Implement IP routing > **View the routing table on a router**
- iv. 3.2.4 Implement IP routing > **Manage auto-summarization between networks**

c. 3.3 Configure OSPFv2 routing

- i. 3.3.1 Configure OSPFv2 routing > **Enable OSPF routing**
- ii. 3.3.2 Configure OSPFv2 routing > **Configure and manage OSPF routing**
- iii. 3.3.3 Configure OSPFv2 routing > **Troubleshoot OSPF routing**

4. 4.0 Network Access

a. 4.1 Configure switch VLANs

- i. 4.1.1 Configure switch VLANs > **View information about VLANs configured on a switch**
- ii. 4.1.2 Configure switch VLANs > **Manage default VLAN configuration settings**
- iii. 4.1.3 Configure switch VLANs > **Configure VLANs on a switch**
- iv. 4.1.4 Configure switch VLANs > **Use trunking to extend VLAN to multiple switches**
- v. 4.1.5 Configure switch VLANs > **Troubleshoot VLAN issues**

b. 4.2 Configure interVLAN routing

- i. 4.2.1 Configure interVLAN routing > **Configure interVLAN routing**
- ii. 4.2.2 Configure interVLAN routing > **Troubleshoot interVLAN routing issues**

c. 4.3 Configure spanning tree

- i. 4.3.1 Configure spanning tree > **View STP configuration information**
- ii. 4.3.2 Configure spanning tree > **Manually configure a switch as a root bridge**
- iii. 4.3.3 Configure spanning tree > **Configure Rapid PVST+**
- d. 4.4 **Configure EtherChannel**
 - i. 4.4.1 Configure EtherChannel > **Configure EtherChannel using PAGP**
 - ii. 4.4.2 Configure EtherChannel > **Configure EtherChannel using LACP**
- e. 4.5 **Configure wireless networking**
 - i. 4.5.1 Configure wireless networking > **Create a wireless network**
 - ii. 4.5.2 Configure wireless networking > **Secure a wireless network**
 - iii. 4.5.3 Configure wireless networking > **Design a wireless network**
 - iv. 4.5.4 Configure wireless networking > **Implement and configure a wireless network**
 - v. 4.5.5 Configure wireless networking > **Optimize a wireless network**
 - vi. 4.5.6 Configure wireless networking > **Troubleshoot a wireless network**

5. 5.0 Network IP Services

- a. 5.1 **Configure NAT**
 - i. 5.1.1 Configure NAT > **Configure static NAT on a router**
 - ii. 5.1.2 Configure NAT > **Configure dynamic NAT on a router**
 - iii. 5.1.3 Configure NAT > **Configure PAT on a router**
- b. 5.2 **Configure DHCP**
 - i. 5.2.1 Configure DHCP > **Configure the DHCP service on a router**
 - ii. 5.2.2 Configure DHCP > **Configure DHCP bindings**
 - iii. 5.2.3 Configure DHCP > **Configure a DHCP relay agent**
- c. 5.3 **Configure DNS**
 - i. 5.3.1 Configure DNS > **Configure DNS**
 - ii. 5.3.2 Configure DNS > **Create DNS zones**
 - iii. 5.3.3 Configure DNS > **Create DNS records**
 - iv. 5.3.4 Configure DNS > **Troubleshoot DNS**

6. 6.0 Security

- a. 6.1 **Configure router security**

- i. 6.1.1 Configure router security > **Configure router passwords**
- ii. 6.1.2 Configure router security > **Secure router access**
- iii. 6.1.3 Configure router security > **Restrict router remote access**
- b. 6.2 **Configure switch security**
 - i. 6.2.1 Configure switch security > **Configure switch passwords**
 - ii. 6.2.2 Configure switch security > **Secure switch access**
 - iii. 6.2.3 Configure switch security > **Enable switch port security**
 - iv. 6.2.4 Configure switch security > **Configure Allowed VLANs**
 - v. 6.2.5 Configure switch security > **Restrict switch remote access**
- c. 6.3 **Configure access control list**
 - i. 6.3.1 Configure access control list > **Implement standard extended and named ACLs**
 - ii. 6.3.2 Configure access control list > **Use wildcard masks in ACLs**
 - iii. 6.3.3 Configure access control list > **Use ACLs to permit allowed network traffic**
 - iv. 6.3.4 Configure access control list > **Use ACLs to block disallowed network traffic**
 - v. 6.3.5 Configure access control list > **Block disallowed traffic**
- d. 6.4 **Implement security measures**
 - i. 6.4.1 Implement security measures > **Implement anti-malware measures**
 - ii. 6.4.2 Implement security measures > **Scan and detect open ports**
 - iii. 6.4.3 Implement security measures > **Implement device hardening**
 - iv. 6.4.4 Implement security measures > **Analyze network traffic using Wireshark**
 - v. 6.4.5 Implement security measures > **Analyze network traffic for potential security risks**
